

Executive Summary

This deliverable constitutes a first version of EPAD's Data and Knowledge Management Plan, focussing on the Longitudinal Cohort Study (LCS) dataset that will be generated by the project within the framework of WP4. The plan will be updated during the project life as needed, particularly as the dataset and related project policies evolve, and also as a consequence of the development of sustainability plans in the framework of WP7. The document closely follows the structure of data and knowledge management plans, as provided by European Commission guidelines for H2020. It provides details on current thinking regarding how the LCS data will be made findable, accessible, interoperable and re-usable (FAIR), plus additional details on other aspects such as data stewardship and governance.
