EPAD Deliverable 4.13

Update Data and Knowledge Management Plan

Executive Summary

This deliverable constitutes an update of EPAD's Data & Knowledge Management Plan, covering the Longitudinal Cohort Study (LCS) dataset and the set-up of the Proof of Concept (PoC) study that are being generated by the project within the framework of WP4. The initial Data & Knowledge Management Plan (D4.5) has been updated to reflect the evolution of the EPAD LCS dataset and project policies related to the LCS and separately to the PoC. It also addresses sustainability plans for EPAD studies and data in the framework of WP7. The document closely follows the structure of data and knowledge management plans, as provided by European Commission guidelines for H2020. It provides details on current thinking regarding how the EPAD LCS study data will be made findable, accessible, interoperable and re-usable (FAIR), plus additional details on other aspects such as data stewardship and governance.
