<b>DOCUMENT VERSION:</b>	<b>1.0 Draft</b>

<b>EFFECTIVE DATE:</b>	<b>26 Apr 2019</b>

### 1. Description of Dataset

European Prevention of Alzheimer's Dementia (EPAD) Longitudinal Cohort Study (LCS), collected according to protocol EPAD-UoE-001. The current and previous versions of this protocol are available via the EPAD website: [www.ep-ad.org](http://www.ep-ad.org).

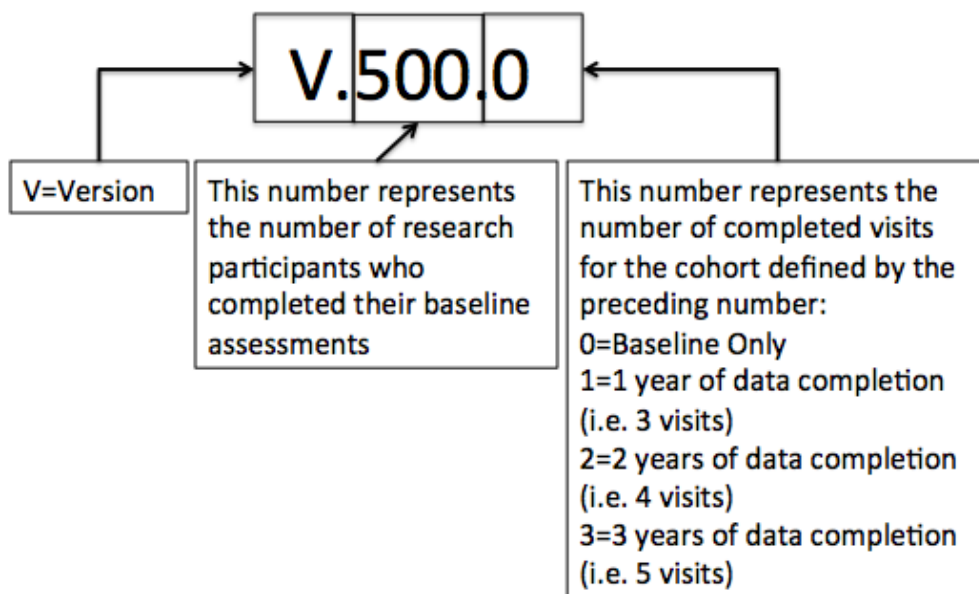

Data sets for which participant recruitment has been completed to date, Last Participant Last Visit (LPLV) are listed below. The definition of a participant in the data set is that the participant gave consent and was enrolled in the EPAD LCS. Participants who have withdrawn from the LCS for any reason have not been replaced. The list of participants included in each data set will be retained by the LCS Study team.

V500 LPLV at V1 = 23Feb2018  
V1500 LPLV at V1 = 07Mar2019

### 2. Data Release Sets

To ensure absolute clarity and consistency of which data are/were analysed for scientific publication a strict definition of the data set will be used. This nomenclature is required to reflect the perpetual recruitment into the EPAD LCS as opposed to waves of recruitment or fixed sample sizes more typical of cohort studies.

The number of research participants in each data release will be influenced by the speed of recruitment with a preference for larger numeric increments in the size of the data set as opposed to frequency of release. The ExCom will make all decisions on data version release.

### 3. DOI assignment (Digital Object Identified)

Each data set will be identified by a unique DOI generated by Aridhia. The DOI will be used to associate all communications and publications with the specific data set.

### 4. Description of Tables

**An electronic version of the data descriptions is provided on line in the EPAD LCS Data Set Library. This document confirms the data definitions as defined at the general release of V500.0. The electronic Data set library will be updated with any changes.**
